Web Hosting
Which option is best for you?

1. **Centrally Hosted Drupal “Offering” Recommended**
   If you are looking to create a website and do not want to deal with any of the HTML and hosting management headaches. If you need help or training on the service, the Web Communications team serve as your personal liaison to help you through setting up and adding content.

2. **Centrally Hosted Faculty Pages [Coming Soon] Recommended**
   If you are a faculty member who wants to quickly post information about you and your area of expertise, this is the place for you. You receive a permanent URL that will never change so you can publish with confidence knowing people will find you even if you have changed sites or services on the backend.

3. **Centrally Hosted LAMP (Linux, Apache, MySQL, PHP)**
   This is for the college or department that want to control every aspect of their site but want to leave the server hosting and security to ITS. You get a place to build leveraging PHP and MySQL. You may want to code from scratch or leverage one of the many open source applications to get your content out exactly how you want. The best part is the technical management of the server and middleware is all handled for you by central ITS and the Service Desk.

4. **College Hosted**
   This is similar to the above LAMP stack except you are leveraging the infrastructure of your local college. They may have tools and services already set up for you to take advantage of being a member of that college. The College supports you via their IT staff. This solution requires an extensive commitment from the College in both technical and infrastructure and prior approval of both the Vice Chancellor for Advancement and Vice Chancellor for IT.

5. **OrgSync**
   This is a service for official student clubs and organizations managed by SUAR. (more info to come)
