What is a Subject Alternative Name (SAN) and how do I submit multiple SANs?

Tell Me

1. **Subject Alternative Name (SAN):** SANs allow you to protect multiple host names with a single SSL certificate.
2. If your server has more than one alias, we can add a SAN, or multiple SANs, to your certificate to insure that certificate mismatch errors do not happen.
3. Submitting a CSR with multiple SANs:
   1. When you submit your certificate signing request you will need to select under certificate type **InCommon Multi Domain SSL (SHA-2)** and add the SANs under the common name.

```
Certificate Type: InCommon Multi Domain SSL (SHA-2)
Certificate Term: 3 years
Server Software: OTHER

CRT Name: test.its.uncc.edu,
Subject Alternative Names: (Comma separated)
```
