How do I run a virus scan with Tetra?

Tell Me

**Info**
The Cisco AMP client for macOS does not have the ability to manually run a scan. The client is constantly monitoring your computer. If you are having issues or believe you have a virus contact the service desk.

If you think you have a virus on your computer, you can force Tetra to scan your entire system.

1. Click on the **Windows Start Menu**

2. Scroll down and Click on **Cisco AMP for Endpoints Connector** folder and then Click **Cisco AMP for Endpoints Connector**

3. Click the **Scan Now** button

4. Select **Full Scan**

**Note**
If you find a virus on your University computer, please contact the IT Service Desk for assistance.
