What is Alertus Desktop?

Tell Me

1. The Alertus Desktop is an emergency notification system.
2. When the University issues an emergency alert, all computer workstations and laptops running the Alertus system will display a full-screen pop-up alert providing messaging about the emergency on campus.
3. The display pop-up alerts are in addition to those the campus will receive on personal mobile devices, and are not meant to replace them.
4. In the event of an emergency, this software allows the NinerAlert system to override current content with urgent information.
