How do I allow Multiple Attempts for In-Video Kaltura Quizzes in Canvas?

Tell Me

**Multiple Attempts**
This new feature is available in the Kaltura Editor. A quiz creator (faculty) may select how many attempts a student can have for the selected quiz, and what is the score type (latest, highest, lowest, first, last, average).

1. Login to Canvas and access a course
2. Click on My Media
3. Click Add New
4. Click Video Quiz
5. Select the preferred video
6. The Quiz Editor will appear. At this point, Kaltura has taken a copy of your original video to create a in-video quiz (IVQ)

7. You can now add the quiz question types to this video

8. Within the Quiz settings, click the Scores option to expand the settings
9. The **Allow Multiple Attempts** will appear

10. You can choose between 2 and 100 attempts for students to retake the quiz.

11. The **Quiz Score to Keep** is comprised of 6 different attempt options.
12. You can choose to not show scores, show scores and to include answers.

13. To see the analytics for that in-video quiz (IVQ), click Actions.
14. Click Analytics.
15. Click the Quiz users tab to view the data table.
16. As part of the update for multiple attempts, the analytics data table will have three (3) new columns:
   a. **Attempts** - related to the Multiple Attempts features.
   b. **Final Score** - displays the final grade for each user.
   c. **Actions** - currently only one action is available. You now can remove a user’s attempt. This will remove the user’s attempt completely and allow the user to take the quiz again.

17. You can use **Canvas Assignments** to pull In-Video Quiz grades from Kaltura into Canvas gradebook. As student retake the quiz their Canvas grades will be updated accordingly.
