How do hosts share a YouTube video in a WebEx Meeting session?

Tell Me

YouTube videos can be shared in a session, however, students will need to watch the video themselves. We recommend that you post the YouTube video link in your Canvas course for student to watch before the WebEx session.

1. You can share a YouTube video with your participants by using the **share application** option. If you select the share screen option, participants won't be able to hear the audio.
   a. When you've started a session, click the **arrow/more button** for sharing and then select your **browser** where the YouTube video is open.
