Plan of Study

The UNCC Catalog website lists the requirements for the CS MS Program (see this link). That Catalog's page allows you to 'click' on an individual course and display the basic information about each course including the course's pre-requisites.

- Graduate courses (5xxx and 6xxx courses) generally have higher expectations than undergraduate courses. Typically, a grad. course will require more of your time per course than an undergrad. course. For this reason, regular (i.e. non Early Entry) CS MS students will usually only take 3 courses per semester. (The maximum allowed is 4 per semester). Early Entry students should take this into consideration when registering for grad. courses while they are still completing their BS degree.
- You can "double count" a maximum of 4 courses (see How does "double counting" work in the Early Entry Program?), but you can take up to 5 total graduate courses prior to completing your BS degree (see https://cci.uncc.edu/academics/computer-science/5-year-babs-ms-degree-program)
- Any time you change your planned graduate courses, you must submit another Early Entry Program form; otherwise BANNER will not let you register for the desired graduate course and no double-counting will occur.
- After you complete your BS, you no longer need to submit Early Entry Program forms and you should follow the advice given to our non-Early Entry students in item How do I make a "Plan of Study"?
